

Support rapid treatment, prevention and spread of the COVID-19 (coronavirus) pandemic with COVID-19 Alerts and Reporting Solution™

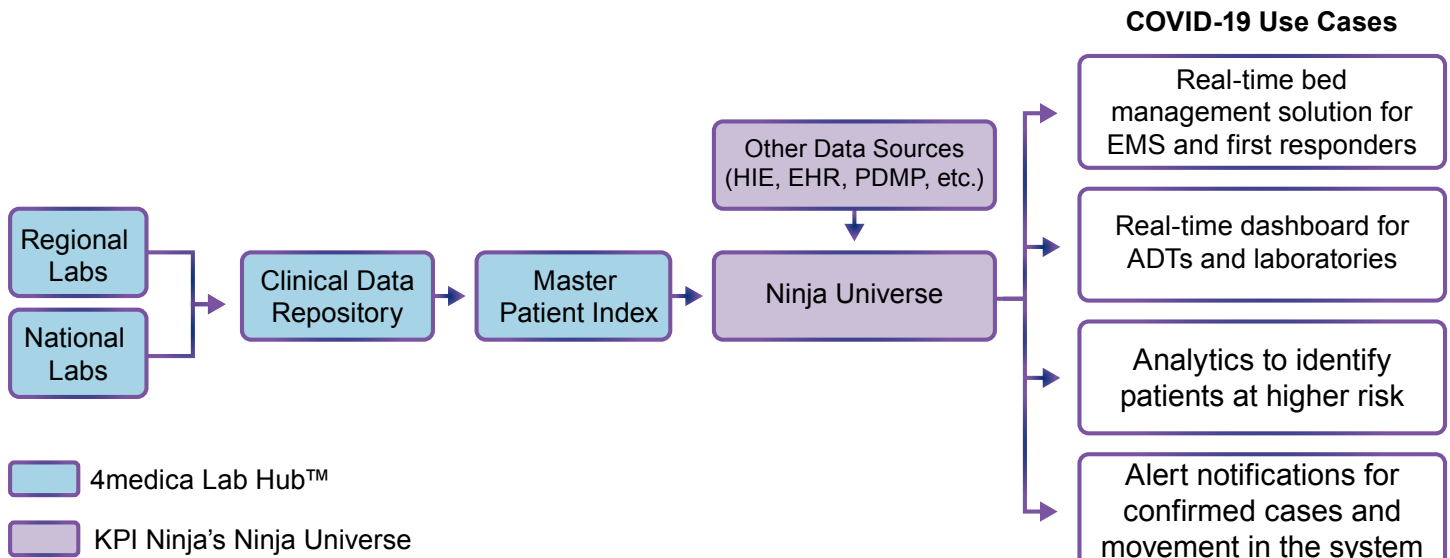

The COVID-19 Alerts and Reporting Solution™ integrates the 4medica Lab Hub™ and KPI's Ninja Universe analytics platform to provide real-time lab data and risk stratification analysis.

Nebraska Health Information Initiative (NEHII) is the first health information exchange using the solution to analyze the risk, prevalence and characteristics of COVID-19 cases in addition to other social resources and factors impacted by the virus across the state of Nebraska.

Precise data is required to identify and track suspected or confirmed patient cases by state concurrently with the availability of bed capacity in order to mobilize people and facilities to care for the growing number of cases across the United States.

The COVID-19 Alerts and Reporting Solution™ integrates the 4medica Lab Hub™ and KPI's Ninja Universe analytics platform to help identify and prioritize patients at higher risk of contracting severe forms of the respiratory disease.

The COVID-19 Alerts and Reporting Solution™ helps healthcare organizations and medical professionals concentrate exclusively on response efforts. Aggregate-level pandemic related data and protected patient health information from commercial and private laboratories are synced onto a single platform. Through a series of dashboards and reports, users quickly and easily monitor coronavirus testing and results to determine the appropriate strategic response. Different categories of visuals and metrics enable users to gain insights on what has been ordered, processed and the results.

- Critical testing information categorized to understand volumes and prevalence of positive cases
- Grouped clinical risk factors identify patients at higher risk of contracting severe forms of the disease
- Comprehensive view of when and where patients seek out care, with notifications for movement of positive COVID-19 cases
- Real-time monitoring of the region’s hospital bed status with dashboards, reports and alerts to support emergency medical services, first responders, and public health agencies

“

The COVID-19 Lab Alerts and Reporting Solution augments our HIE to report accurate, knowledge-based data that informs life-saving decisions and community emergency prevention efforts at a time of unprecedented need.

”

Jaime Bland, NEHII CEO
